Make a note of the identifier. When the next command is run, it will destroy the APFS partition and all the data it contains (Figure B).. Juniper srx configuration Diskutil apfs deleteContainer /dev/disk2s2. Figure B. If the command displays an error after processing, don't be alarmed—this is known to happen on occasion.. To verify that the command proceeded correctly, execute the command from the first step from above once again and locate the matching identifier.

Revert the file system back to HFS+. By executing the following command, the partition that previously acted as the container for the APFS file system will be initialized for use with HFS+ (Figure D).. Figure A. Once the command runs, the correct device will list AppleAPFS as the GUID partition name.. It should now read AppleHFS instead of AppleAPFS (Figure C) Figure C. Before the partition can be used, it must be initialized for the new file system.
